Honeywell integrates aeSolutions' software, aeShield®, into new Process Safety Suite

Greenville, South Carolina, USA – August 7, 2018 – Honeywell Process Solutions (HPS), a pioneer in automation control, instrumentation, and services, has entered into a reseller agreement with the Software Products division of Applied Engineering Solutions, Inc. (aeSolutions®). Through the reseller agreement, aeShield® is integrated into Honeywell's new Process Safety Suite.

This integration pairs the HAZOP/LOPA, SRS, and SIL Verification requirements from aeShield with Honeywell's Safety Builder, Process Safety Analyzer, and Trace into a Process Safety Suite. This comprehensive suite will provide unprecedented visibility throughout the process safety lifecycle.

"Our aeShield team is extremely excited to partner with Honeywell," said Mike Scott, President of Software Products at aeSolutions. "Significant synergies between aeShield and existing Honeywell technologies offer a new and revolutionary way to manage process safety information. Connecting design assumptions to real-time operating data provides the opportunity to view process safety as a profit center and proactively removes risk to the business."

"The aeShield and Honeywell technologies work together to integrate critical steps in the process safety lifecycle," said John Rudolph, President of HPS. "The result is an enterprise-wide risk identification and reduction capability that is unique in the industrial process safety market."
